Description

Pasternack's new lines of Type-N test cables built on our PE-SF200LL coax are optimized for use up to 6 GHz. Our Quick-Lock type N connectors have reduced threads making it easier to mate and de-mate the connectors while still providing a secure threaded connection. The highly flexible low loss coax design improves the usability of the test cables reducing the strain applied to your test components and making it easier to route the cables in your test setup or equipment rack. The flexible coax cable has excellent electrical properties including low insertion loss and >100 dB of shielding effectivity. These cables are an excellent choice for production testing where speed of connection is important while maintaining good electrical performance. These 6 GHz test cables are available with Male and Female N-Type connector options and are stocked in standard lengths and available for same day shipment.
